

Function Operations with Proper Notation

Review of material to date

The inverse of a function

1. Given $f(x) = 3x + 2$. What is the inverse of the function $f^{-1}(x)$?
 - (a) Rewrite the function reversing x and y . (assume that y and $f(x)$ are interchangeable)

 - (b) Solve for x . Finish by putting y on the left side of the equality.

 - (c) State the answer as $f^{-1}(x)$ equals an expression.

Function substitution

2. Given $f(x) = 3x + 2$. What is $f(2x - 1)$?
 - (a) Perform the substitution, putting $2x - 1$ in parenthesis.

 - (b) Simplify, beginning each line with a leading equals sign if it is equal to the line above.

Function composition

3. Given $f(x) = x^2 + 2$ and $g(x) = x^2$ What is $(f \circ g)(x)$?
 - (a) Rewrite $f \circ g$ and perform the inner substitution (i.e. for g): $f(g(x)) = f(x^2)$

 - (b) Perform the substitution, putting x^2 in parenthesis (and using a leading equals sign).

 - (c) Simplify, beginning each line with a leading equals sign.

Unscaffolded practice problems

Write answers on loose leaf lined paper using the notation practiced in the previous section.

The inverse of a function

Derive the inverse of each function. Simplify the expression.

4. $f(x) = \frac{1}{2}x + 2$

5. $f(x) = \frac{2}{3}x^2 - 3$

6. $f(x) = \sqrt{x-1} + \frac{1}{2}$

Function substitution

7. Given $f(x) = x^2 - 1$. Simplify $f(2x - 1)$?

8. Given $f(x) = x^3$. Simplify $f(x + 1)$?

9. Given $f(x) = 4 - (2x^2 + x)$. Simplify $f(\frac{1}{2}x - 3)$?

Function composition

In each exercise, perform the composition $f \circ g$ and simplify.

10. Given $f(x) = \frac{1}{2}x^2 + 1$ and $g(x) = 2x$

11. Given $f(x) = \sqrt{x-4}$ and $g(x) = x^2 + 4$

12. Given $f(x) = \frac{1-x}{x^2} + 1$ and $g(x) = 2x + 3$
