### Do Now Skills Tracker: Graphing inequalities

For graphs, use a pencil and straight edge. Label each line.

1. Solve for  $y$ , then graph the two inequalities.

$$y > \frac{1}{2}x - 3$$

$$2x + y \leq 7$$

Mark the solution set with a capital “S”. Is the point  $(-2, -4)$  a solution? Justify your answer.

2. Does the table represent a linear function? Justify your answer.

Use pencil for graph (1 point)

1. Solve for  $y$ , then graph the two lines. Label both lines and the solution to the system, the intersection, as a coordinate pair. (3 points)

$$y = 2x - 7$$

$$x - 2y = -1$$

2. Solve for  $y$ , then graph the two inequalities. Mark the solution set with a capital “S.”

$$y \geq \frac{2}{3}x + 3$$

$$2x + y < -5$$

Determine and state whether the point  $(-5, 5)$  is a solution of the system of inequalities. Justify your answer.
