Two angles whose measures sum to 180 degrees are

_____

The point dividing a line segment into two congruent parts is called the

_____

Angles #1 and #2 are called

_____ angles.

Lines that intersect at right angles are

_____

The longest side of a right triangle is the

_____

Points all on the same plane are called

_____

Two lines in a plane staying the same distance apart and never crossing are

_____

Half of a line, starting at one point and continuing straight in one direction is a

_____

Concentric circles have the same

_____

If angles #1 and #2 are congruent, then $\overrightarrow{AC}$ is the

_____

The point at the tip of an angle is called the

_____

An angle with a measure less than 90 degrees is an

_____ angle.
